**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,584,207 to Paul et al.

Paul et al. clearly teaches the construction of the construction of a motor supporting device (100) comprising:

a motor accommodating section (154) for accommodating and holding a motor (124) therein, and

a gear holding section (164, 166) that rotatably holds a gear (112, 118) for externally transmitting a driving force of said motor,

wherein said motor supporting device further comprises a covering section (132), which is monolithically/integrally formed with said motor accommodating section and flatly covers said gear holding section.

4. With regards to claim 2, Paul et al. disclose a covering section comprising a side pressing section that abuts to an end portion of said gear provided to a drive shaft of the motor as shown in Figure 2.
5. With regards to claim 3, Paul et al. disclose a fitting section (150,138) for fixing said covering section to said motor accommodating section, with said side-pressing section being abutted to the end portion of said gear mounted to said motor drive shaft, said fitting section being provided to at least either one of said covering section and said motor accommodating section as shown in Figure 2.
6. With regards to claims 4 and 6, Paul et al. disclose a fitting section for (168, 170) coupling the end portion of a support shaft that is formed in said gear holding section for rotatably holding the gear to said covering section, said fitting section being provided to at least either one of said covering section and the end portion of said support shaft as shown in Figure 2.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 5, 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,584,207 to Paul et al. in view of U.S. Patent No. 5,654,847 to Yagi et al.

Paul et al. discloses the construction of a motor supporting device as described above.

However, it fails to disclose a covering section being bendably formed with respect to said motor accommodating section, and comprises a side pressing section that abuts to the end portion of said gear provided to the motor shaft.

Yagi et al. teaches the construction of link portions (15c) being bendably formed for the purpose of connecting the printed circuit board (15b) to the printed circuit board (15a) of the base (11).

It would have been obvious to one skilled in the art at the time the invention was made to use the link portions disclosed by Yagi et al. on the motor supporting device disclosed by Paul et al. for the purpose of connecting the covering section to the motor supporting device in a one-piece bendable construction.

9. With regards to claim 8, Paul et al. disclose a fitting section (150,138) for fixing said covering section to said motor accommodating section, with said side-pressing section being abutted to the end portion of said gear mounted to said motor drive shaft, said fitting section being provided to at least either one of said covering section and said motor accommodating section as shown in Figure 2.

### ***Conclusion***

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
